PROJECTS

[Swipeflix](#)

- **SwipeFlix** is a **Tinder-like movie-matching app** developed using Android Studio that allows multiple users to connect in a session via a unique code. Users swipe right or left on movies based on their preferences. If **70% or more** of the participants swipe right on a particular movie, the app displays an **"It's a Match!"** screen for everyone.

[Polo](#)

- Polo is a real-time **mutual location tracking app** developed using React Native designed to help friends find each other in crowded or open spaces, like festivals, raves, meetups, or even during travel. The app prioritizes simplicity, privacy, and dynamic location sharing only when mutually agreed upon.

[LinkedOut](#)

- A **full-stack web application** designed to help users prepare for technical interviews. Features include user authentication, **AI-powered** mock interview sessions, **real-time feedback**, and performance analytics. Built with Next.js, Tailwind CSS, and Firebase for seamless user experience and secure data management.

[Maanache 5](#)

- Manache Ganapati Information App is an Android application that provides detailed information about the five Manache Ganapatis in Pune along with their respective locations. The app supports two languages: English and Marathi, allowing users to easily access information in their preferred language.
